There is no proof of difference in relative development of lean meat and fat. The experiments reported by the Iowa station include two trials of wide versus narrow rations. In both cases the wide lot gained somewhat more per day and per pound of dry matter in the feed. In the first trial the wide lot ate somewhat more dry matter than the other; in the second trial this particular is not stated. In neither case were the differences very marked. It seems safe, therefore, to compare simply the computed protein supply (digestible) in the two cases, using the figures in Farmers Bulletin 22 (revised) as the basis. Iowa Experiment Station, Bulletin-IS. pp. 373--151. Comparison of radons of high ami low protein content fed to hogs. In the second...
