*This type of ebook is everything and helped me looking forward and a lot more. It is actually full of wisdom and knowledge I realized this book from my dad and i suggested this book to discover.

Original publisher: Champaign, IL: US Army Corps of Engineers, Construction Engineering Research Laboratories ; Alexandria, VA: National Technical Information Service, distributor, 1997 OCLC Number: ocm40384345 Subject: Electric insulators and insulation -- Testing. Excerpt: . . . 14 USACERL TR-97 57 Starting Frequency, which is normally the same as the Starting Center Frequency defined above. Ending Frequency, which is normally the same as the Ending Center Frequency defined above. Number of Frequency Points per Octave, which defines the increment in frequency for the response spectrum calculations, which for the example here is 24, yielding 168 points (SDOF oscillators) across the seven-octave record. Percentage of Critical Damping, which is the same value used for defining the design response spectra (2 for the current example). Figure 4 shows the unitless response spectrum plots for each of the narrow-band random records in Figures 3a - 3j, plus the IEEE 693 design spectra from Figure 2. Next, the narrow band records are scaled such that their response spectra become equivalent to the amplitude shown in the design spectra. Figure 4 shows where and to what degree the unitless spectra need to be scaled to produce response spectra equivalent to the design spectra. Table 2 shows frequency ranges and expressions (linear in this example) used to scale the unitless spectra. Figure 5 graphically shows the expressions for scaling the horizontal (lateral and longitudinal) and vertical narrow-band random records. Figure 5 also includes the information from Table 2 to provide direct comparison with the plots in Figure 5. Time for the narrow-band random records is directly related to the center frequency as defined by the sweep rate, with their ranges shown in Table 2. The...
