RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Original publisher: Aberdeen Proving Ground, MD : U. S. Army Research Laboratory, 2005 OCLC Number: (OCoLC)74280032 Subject: Projectiles -- Research. Excerpt: . . . were retained for the local model: the rigid body motion and the first two elastic modes. Results for the response at masses 2 and 4 for all three cases are shown in figure 6. Both SEREP solutions are in excellent agreement with the baseline model. The effect of neglecting the highest eigenvalue shows up as a slight difference in the response for this case as compared to the baseline case. This simple spring-mass model verified that the implementation into Dyna3d was correct. Comparison of the baseline and SEREP results indicates that this approach represents a reasonable method of solving the global local modeling problem. It is important to realize that the current implementation of SEREP assumes that all modes below a given upper frequency are retained. If the system shown in figure 5 was driven at a frequency higher than that of the greatest retained system natural frequency, then the error between the baseline solution and SEREP solution would increase. Figure 6....

Reviews

This ebook is definitely not simple to begin on reading but really enjoyable to read through. This really is for all who statte that there had not been a worth reading. You may like how the author publish this ebook.

This book may be really worth a read through, and a lot better than other. It is really basic but excitement inside the 50 % in the pdf. I realized this pdf from my dad and i encouraged this publication to learn.
